TempCleaner is a portable utility designed to easily clean temporary files from your system. It

allows you to delete files created by other applications in just a few mouse clicks. When the program is in action, you may add or remove folders as you wish. The program can be used by both novice and experienced users. It has an intuitive interface, so even a beginner may get started immediately with only a few instructions. Another addition of tempcleaner is that it is able to target hidden files as well. In other words, you can view and delete items stored in ".ini" files. Of course, you are not restricted to the folders listed by default. Hence, you can select to add or delete any items on your hard disk by just clicking the "+" or "-" buttons. The list of files scheduled to be deleted may be modified at any time by simply clicking the "Settings" button. Note, that the program does NOT modify folder permissions, it deletes the files and folders at the specified locations solely. A very important feature of the TempCleaner utility is that it is portable. As such, you may use it to delete temporary files regardless of the location, so that you do not have to unpack it and extract its contents to run it. The program is extremely easy to use. All you have to do is to double-click the corresponding icon on your desktop. This will start the procedure, and you can close the program at any time by clicking

the "Close" button. The best part is that you can schedule the operation on a specific time. For example, you can choose to automatically clear up the temporary files every night. An extremely efficient utility for cleaning up temporary files While, ideally, there is a need to delete temporary files when they are no longer needed, the traditional approach fails to eliminate them promptly. But thanks to the powerful technology implemented by TempCleaner, you can easily address temporary issues on your system without too much stress. Moreover, the feature is able to scan the hard disk and delete information stored in ".ini" files, files created by other programs, or even files residing in folders that are not listed by the default settings. Furthermore, you can schedule these actions, which means that you may set TempCleaner to remove files regularly, such as files created by specific applications. The utility is perfect for both novice and experienced users. In fact, b7e8fdf5c8
